LED Headlight - Model 9800

A SMART HEATING SYSTEM

The Model 9800 offers a smart heating system that senses ambient temperature and turns the integrated heating system in the lens on & off. This system only uses 15-18 watts of power, exceeds strict military standards for de-icing, and actually clears ice & snow twice as fast as conventional halogen lamps.

When does the heater turn on?

Heater turns on or off according to temperature changes and vehicle power:

- Heater will turn on when temperatures drop, generating enough heat to prevent ice build-up
- Heater will turn on when powering up, de-icing the light as rapidly as possible
