

MODEL 8633 EVOLUTION

UNRIVALLED SAFETY

Putting Safety on the Highest Pedestal

J.W. Speaker's Model 8633 Evolution LED headlight now addresses the need for effective and efficient de-icing to support around-the-clock operation. Re-designed for superior visibility, extreme durability, and unmatched longevity making it perfect for any job or worksite. Explore model options including daytime running light, front position, turn signal, high and low beam, and SmartHeat® Technology. The Model 8633 Evolution offers a powerful and unique LED compact upgrade for pedestal mount 5.75" (PAR46) headlights.

SmartHeat™

HEATED LIGHTING TECHNOLOGY

J.W. SPEAKER®
Engineered. Lighting. Solutions.

Model 8633 Evolution is available at your authorized J.W. Speaker dealer.

8633 EVOLUTION

BREAKING THE STANDARD

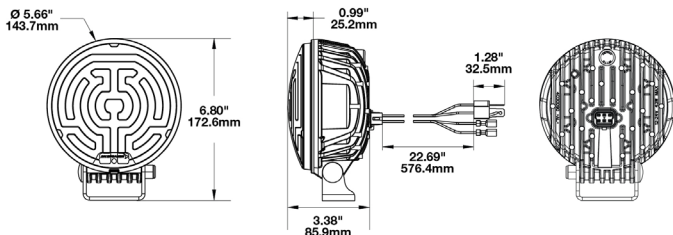

With similar optics to our Model 8630 Evolution and our Model 8631 Evolution LED Headlights, our Model 8633 Evolution is mounted on a pedestal and now has J.W. Speaker's innovative SmartHeat® Technology to illuminate any environment.

Work Through the Cold & Snow with SmartHeat®

Now available with SmartHeat® Technology, keep work going throughout the winter months with confidence. The heated versions of the Model 8633 Evolution feature a thermally conductive grid system that will de-ice the lens up to twice as fast as other lights. The SmartHeat® system automatically reacts to outside temperature changes on a real-time basis with no interaction required by the driver. Designed for efficiency, the thermal grid is powered by the High Beam or Low Beam, depending on which is in use.

Versatile Features:

- High & Low Beam pedestal headlights.
- SmartHeat® Technology to de-ice lens without driver intervention.
- Headlights offer DOT- and ECE-compliant options making this product 100% legal for on-road use.
- Heated Headlights are sold as single lights and 2 light kits.
- Non-heated headlights are sold as single lights or kits.
- Plug-and-play installation for easy installation.
- Turn signal, front position, & daytime running light functions utilize an outer ring at high intensities while high and low beam utilize inner optics.
