

MODEL 840 XD VERTICAL FLOOD FORKLIFT WORKLIGHTS

Some forklift operators have found that mounting general purpose worklights to their forklifts causes light to reflect off of the forks and/or uprights, creating glare. We have created the Model 840 XD vertical flood light to specifically reduce this glare, without sacrificing on workspace illumination.

There are two versions of the vertical flood beam pattern, a right-hand version and a left-hand version. Their beam patterns have been specifically engineered to be used in conjunction with one another to provide ample illumination while at the same time minimizing glare to the uprights.

TRADITIONAL FLOOD LIGHTS

Traditional flood patterns create glare and lack intensity where it's needed the most

MODEL 840 XD VERTICAL FLOOD LIGHTS

The Model 840 XD puts light exactly where the operator needs it while minimizing glare

Model 840 XD Vertical Flood

- 1,080 Raw Lumens, 780 Effective Lumens
- Polycarbonate Lens, Polycarbonate Housing
- Universal Pedestal Mount

Pattern	Voltage	Lens Material	Part #
Left Hand Vertical Flood	12-48V DC	Polycarbonate	1300301
Right Hand Vertical Flood	12-48V DC	Polycarbonate	1300311

J.W. Speaker is a leading manufacturer of innovative LED lighting products. Our products span a wide range of categories including LED headlights, worklights, emergency and warning lights, and much more. This product is proudly manufactured in the U.S.A.
