# KEEP WORKERS OUT OF DANGEROUS WORK ZONES

J.W. Speaker is proud to announce the new Model 527 RED 5" x 10" LED warning light. Originally designed for use in mining applications, it offers a new level of safety to any job site.

The Model 527 RED is designed to be mounted, aimed down, over a potentially hazardous work area, such as the swinging path of a shovel or drag line. It projects a large red "Keep Out" zone of light onto the ground to alert pedestrians and vehicles to stay out of that area.

The Model 527 RED is built to stand up to harsh environmental conditions, making it a dependable safety tool. It produces a bright, red light that ensures that the "Keep Out" zone stands out in the dark, which translates to a safer and more efficient job site. The brightness (lux) and pattern size will vary based on the mounting height. Use the table below to determine what configuration is best for your application.

### Model 527 RED - 5" x 10" Warning Light
